

Power distribution to Steinach campsite

The old electrical connections on the Steinach campsite were replaced with solid, state-of-the-art distributors.

Customer / installation engineer:	City of Steinach
Stipulation:	Renovation of electrical connections on the individual mobile homes
Solution:	V2A distribution cabin on plinth with two doors, one locked and prepared for other components (communication RJ45 receptacles for remote scanning), small distributor for the parking spaces
Article:	V2A distribution cabins Item no. 153838 KSV 2516 on ground spike with switch and socket Item no. 154613
Quantity:	5 units V2A distribution cabins, 74 units KSV on ground spike
Equipment:	Meter on DIN rail, RCBD, individual sockets at each consumer point, power line to distribution type KSV 2516
Areas of application:	Campsites

Initial situation

The old general distribution facilities no longer serve their purpose and need to be replaced. With power to be distributed to more than 60 parking spaces, an optimum new solution was required. Every power consumer should be served and billed individually.

Customer benefits

- Metering of power to each individual mobile home
- Plug-in system for each power consumer directly at each mobile home
- 16 Amp version (sufficient power also for winter operation, heating, cooking, washing)
- Clean installation with integrated RCD protection for each power consumer
